Design and Technology Policy

March 2002, Reviewed March 2005,
September 2010, November 2013, June 2016

1. WE BELIEVE

Design and Technology plays a part in all of our lives. With constant advances in technology across the world it is increasingly important for children to have a good understanding of design and the processes involved in producing a quality product in a range of relevant contexts.

2. AIMS AND OBJECTIVES

- To create an interest and enthusiasm for designing and making in children of all abilities and ages.
- To provide a developmental range of activities to increase the children's capability and confidence in their own ideas.
- To help children gain an understanding of the ways in which people from the past and present have used design and Technology to meet their needs and how this is relevant to them.
- To develop children's confidence and skills in using and selecting from a wide range of tools and materials.
- To help the children to become increasingly proficient across the range of media used.
- To encourage children to be self critical, to evaluate and seek to improve their work and solve problems.
- Understand and apply principles of nutrition and learn how to cook.

3. PLANNING

Long Term Plan

Design and Technology has been allocated the following times

Design Technology	% of Time	Time per Year
Year 1	3%	24hrs
Year 2	3.5%	27hrs
Year 3	3%	23hrs
Year 4	4.25%	34hrs
Year 5	4.5%	36hrs
Year 6	4.5%	36hrs

The time is then distributed across the media in which the children will work with as shown on the Key Stage Long Term Plans for Design and Technology.

Design and Technology Policy

March 2002, Reviewed March 2005,

4. RELATIONSHIP WITH THE REST OF THE CURRICULUM

In both Key Stages the positioning of the Technology modules is designed to compliment the Focus Link (Topic) for that term.

FOR EXAMPLE In Key Stage 2 the FOOD element 'Christmas Cupcakes' is designed to coincide with work on Christmas in RE and is timed to coincide with the children's Charity Fund Raising fortnight.

When arranging the distribution of the Technology Units across the years it was a priority to enable teachers to profit from links with the rest of the Curriculum. However the Design and Technology time is not used falsely in order to make models for other subjects. Should the links with other subjects not enable the proper aims and objectives of Design and Technology to be met then the subject will stand alone. Where cross curricular links are sound however it helps greatly to achieve the aim:

"To help children gain an understanding of the ways in which people from the past and present have used Design and Technology to meet their needs and how this is relevant to them."

Within the term the teachers decide how to best apportion the time allocation. Usually the work is done as a block, which may mean a very intense but productive fortnight of Technology, with every afternoon possibly being devoted to the subject. It is highly unlikely that the subject will be taught as a weekly lesson as this would be an inefficient use of the time particularly as there are so many resources to gather together. In addition, it is permissible for teachers to have full D&T days. This really allows the pupils to get to grips with a project. It is also a way of maximising time and not wasting time having to set up and pack up at frequent intervals. The Literacy and Numeracy time allocations allow for special D&T days.

5. MEDIUM TERM PLANS-SCHEMES

The Medium Term Plans for Design Technology have been created by the subject leaders to cover the breaths of skills and knowledge stipulated in the new curriculum.

. They:

- Provide clear guidance and enable differentiation and extension activities to be arranged.
- Give staff who are not experts in Design & Technology the confidence to tackle the subject well with their pupils and to meet the requirements of the National Curriculum fully.
- Provide a starting point.
- Provide a focus for discussions between the teacher and co-ordinator.
- Avoid the stage of having to think what to do.
- Avoid activities which are less than adequate.

Design and Technology Policy

March 2002, Reviewed March 2005,
September 2010, November 2013, June 2015

- The medium term plans have enabled confidence to grow and enabled staff to use the models given and to adapt the activities or to change them altogether and produce original plans based on a well-tested approach.

6. ORGANISATION PROCESS

The decision making process involved as teachers prepare to implement a Design and Technology module is as follows:

1. Does the D&T project involve the three types of D&T activity?
 - a) investigate, disassembly and evaluative activity (IDEA)]
 - b) focused practical task/s (FPT)] Technical Knowledge
 - c) design and make assignment (DMA)]
 (it should be noted that IDEA activities do not have to be taught before a FPT but each unit of work should always have a DMA, this will be at the discretion of the Class Teacher based on the needs of the children being taught and the nature of the D&T project).
2. How and when is the D&T module to be blocked?
3. Agreements need to be sought over access to materials particularly across Key Stage 2.
4. Which resources are required? Are any extra resources required? Approach co-ordinator to order these if necessary.
5. If colleagues feel insecure about a particular project or require support in a particular element of it, classroom support from the co-ordinator can be sought.
6. Volunteer Helpers have to be arranged, particularly if there are potentially hazardous activities (e.g. hot glue guns, sharp knives)
7. Is setting appropriate particularly for mixed aged classes or is the skill distribution across such classes more valuable? (See also Special Needs section).
8. What needs to be gathered to enable children to evaluate and disassemble related products? (If this approach is being used).
(Note; disassembly does not necessarily mean taking the toaster apart! It can be an evaluation of a product without its destruction. Similarly it could involve making a working model in Technical Lego to establish how it works and how linkages are made.)
9. Which skills need to be taught/revised before the children can begin making e.g. use of hacksaw and bench hook.
10. Are children to be working as individuals, in pairs or small groups?
11. What are the essential rules of the classroom when hazardous activities are being tackled?

These issues are debated by planning teams at their **short term planning** meetings.

7. HEALTH AND SAFETY ISSUES

1. Lessons must be safe (see **The Use of Tools in Connection with Technology**)

Design and Technology Policy

March 2002, Reviewed March 2005,
September 2010, November 2013, June 2015

2. Children must never use a tool until they have been taught how to use it and proved that they can use it properly.
3. Children should appreciate the properties of the materials they are handling and any dangers associated with them.

4. Food

- Particular care should be taken when handling food.
- Every lesson should start with a review of do's and don'ts with food. All children must wash their hands. This should be witnessed if there is any doubt.
- All equipment should be washed before and after use.
- Equipment specifically purchased for food technology must be used and not from the staff or school canteen kitchen.
- Any child seen to put their fingers in their mouths (or any other unclean place) must wash them immediately.
- All other equipment and clothing must be moved away from the work surface.
- Children should do everything for themselves (except near an oven).
- This includes weighing, measuring, mixing and cutting. Use of knives however must be closely supervised by an adult.
- All surfaces must be cleaned thoroughly using yellow cloths only used for this purpose.
- Ingredients must be stored appropriately.
- Children must not use ovens.
- Ovens must be cordoned off.
- Baking should be consumed on the day or sent home that night.

5. Health and Safety Staff

HEALTH AND SAFETY CO-ORDINATOR IS THE HEAD TEACHER
THERE IS A STAFF HEALTH & SAFETY REPRESENTATIVE
THERE IS A DEDICATED FIRST AIDER
RISK ASSESSMENTS ARE IN PLACE IN THE CLASSROOM
KITCHEN
THERE ARE FIRST AIDERS IN ALL YEAR GROUPS

9. OTHER PRIORITIES OF THE DESIGN AND TECHNOLOGY PROCESS

1. Children should know the range of materials available to them before they start designing, and work with appropriate economy with the available resources.
2. Everyone must appreciate that quality is expected at every stage.
3. Designing, drawing, modelling, and making the final product are all important and should receive a quality input and response from the teacher and pupil.

Design and Technology Policy

March 2002, Reviewed March 2005,
September 2010, November 2013, June 2015

4. Evaluation of every stage of the process is vital and pupils must accept as normal the need to continually seek improvements.
5. Display of finished products should celebrate the whole process.

10. EQUAL OPPORTUNITIES

Clearly there still exists in society an inequality in the involvement of girls and boys in technological areas. The danger and practice has been that this has become self-perpetuating.

In the Primary School this can easily be entrenched so that by the time the pupils enter secondary education girls in particular do not see Design and Technology as being relevant to them.

At this school every effort is maintained to demonstrate members of both sexes being involved in all technological activities. (e.g. men and women working with textiles and food, women and men working as engineers)

In addition careful groupings of pupils must avoid situations where children become sidelined into only certain aspects of a design and make task. The worst case scenario is where the girls do all the drawing and measuring while the boys do all the sawing and gluing.

11. SPECIAL EDUCATIONAL NEEDS & GIFTED & TALENTED PUPILS

The S.E.N. policy expects that there will be appropriate differentiation for pupils in Design and Technology.

Teachers should ensure that a special need in reading or writing for example does not hinder a child's performance in Design and Technology.

Such children should have the necessary support to give the children a level of independence equitable with their peers.

It is also worthy of note that children who do not have S.E.N. in other areas of the curriculum do sometimes have special needs in Design and Technology. This may come as a shock to the pupils and produce unsatisfactory attitudes to their work. Strategies need to be prepared to ensure that these needs are met. There will also be pupils who have particular gifts for Design and Technology. Staff must be aware and enable such pupils to extend and to put greater demands on such pupils.

Examples will include those who have developed a high level of skill in technical activities at home and those who have worked at an advanced level with construction kits. Indeed in the area of construction kits there will be a huge discrepancy between those who have hardly touched the equipment and those who can create a hydraulic JCB. Gifted children can often be extended by posing increasingly difficult problems on the basic idea.

"Ah but have you considered this?" or

"What if ***** how could you solve this?"

Design and Technology Policy

March 2002, Reviewed March 2005,
September 2010, November 2013, June 2015

Sometimes particularly gifted pupils will need to have the freedom to press ahead on their own. However team work is an important part of the process and those who seem particularly talented in D&T may actually only be talented in certain areas of the subject. Most successful products in the market have had a team input, even if invented by one person. Advice on Gifted and Talented Pupils in Design Technology can be sought from the Gifted and Talented Co-ordinator.

Teachers may find it helpful to take note of these factors when planning a differentiated D&T project particularly with children with Special Educational Needs in mind:

- Could the child/children work on shorter more focused assignments rather than longer open tasks as shorter tasks provide small elements of success, rewarding and motivating children regularly?
- It may be more beneficial for the activity to be adapted so that the child/children are using contexts they are familiar with.
- It may be more appropriate for the child/children to adapt or make improvements, or add a new feature to the design of a product rather than 'invent' a whole new product.
- Could they design a product where they are given alternative solutions?
- Could they manage a project where certain aspects are restricted?

These factors are to be used as guidance only for class teachers when taking account of SEN children in their planning, thus they may or may not be relevant depending to the needs of the group of children.

12. LEVEL OF ADULT SUPPORT

Wherever possible children should do all their own work. This is regardless of age or ability. If children are regularly struggling, then clearly the task was beyond them and inappropriate. Children however should not be underestimated and even in the Foundation Stage are clearly able to bake without a volunteer touching their food, except to put it in or out of the oven.

Adult help is constantly required to suggest, question, inform and advise. Adults need to teach specifically how to use equipment properly and this will include demonstrations.

On occasions there will be a need for an adult to offer greater help. This will be when:

- A pupil has tried to solve his/her own problems and failed;
- A pupil needs help over a hurdle which will then open up a whole new range of possibilities for the child.
- A pupil has become de-motivated and needs success to fire them on to the next challenge.
- The area of help is not linked to the specific objectives of the lesson.
- The skill required is way in advance of the pupil, but the design task from the pupil is a reasonable suggestion from the pupil (i.e. not in the realms of fantasy).
- An example of this could be in the use of a glue gun. Perhaps due to the age of the child the actual gluing of an object with a glue gun is acceptable by an adult providing.
 - a) Gluing with other glue would be unsatisfactory
 - b) Gluing is not an objective of the lesson
 - c) Not gluing would deny a child any hope of success and prevent a design task from being completed satisfactorily.

13. ASSESSMENT

Formal assessment, recording and reporting arrangements for Design Technology are made using the school's FLiC program. Teachers will complete their own ongoing assessments to ensure that appropriate progress is being made.

14. RESOURCES

Resources are stored in a comprehensive central Science and Technology store. Storage in the school is at a premium and therefore the central store was created to become the entitlement for the school.

It is however made up of stackable storage boxes. Therefore when a class is to begin a block of Technology work the storage boxes are all shipped to the classroom area to set up a mobile temporary classroom Technology store so that everything the pupils need is to hand. When the work is complete the storage boxes are returned to the central store.

There are wheelie bins for the collection of reclaimed materials.

(Note: Staff must lift boxes down using a foot stool when required, probably at the start of the day, and then pupils may carry them to the classroom. The same in reverse applies when the boxes are being returned. Pupils must not help themselves to equipment from behind the resources store as many boxes are too high and the contents are tempting to children to play with.)

There is an annual stock take and the co-ordinator is responsible for bidding for funding for Design Technology. The co-ordinator is responsible for the requesting of materials, their organisation and good management. Children are not expected to pay for their work and often products are kept at school for exhibition.

There is no charge for Food Technology though pupils are sometimes asked to bring ingredients to school.

There is a bookable timetable for teachers and year groups to book their required times in the school's classroom kitchen. Foundation stage will take a regular Monday morning slot.

Kitchen equipment with an element of risk e.g. the sharp knives will be stored in Mrs Nicholls cupboard to be collected and returned by a member of staff.

15. FOUNDATION STAGE

The children in the Foundation Stage are exposed to elements of Design and Technology on a daily basis through their on-going provision.

Examples are:

- Table / floor construction kits
- Sand and water play
- Large construction equipment
- Play-doh
- Workshop area

In addition the children are engaged in specific projects such as designing and making articles linked to a specific theme. These young children should also be exposed to 'disassembly' as described above. Role play also plays an important part in developing a context for the appreciation of the designs and processes in the world around the children.

Design and Technology Policy

March 2002, Reviewed March 2005,
September 2010, November 2013, June 2015

Food technology is a key area of the Foundation Stage D&T programme. This is a much enjoyed and very successful area in which the pupils can work within the D&T curriculum.

The Foundation Stage Policy describes in detail how children are engaged in Design and Technology work.
